

Green House Gas Emissions (Metric Tonnes) by Year
Scope 1 & 2 Reduction Target 30% by 2030.
Scope 3 Reduction Target 10% by 2030

NARMCO	4514.69	4745.69	3766.19	-16.58	30	NARMCO	1133.02	1590.00	1021.60	-9.83	10

Increases can be attributed to:

- (1) CSL - Central Stampings Ltd. Windsor, ON CAN**
 - a. Scope 1&2 Significant Increase in Natural Gas usage January, February and March 2023 compared to previous 2 years, broken bay doors in winter months causing increased use of Heating systems.
- (2) NMP - Nartech Metal Products - Guelph, ON CAN**
 - a. Scope 1&2 # of employees have increased, and sales have significantly increased since the 2021 baseline year.
 - b. Scope 3 Increased prelaunch shipments for ELCV program
- (3) NMX - Narmx Querétaro SA DE CV - Querétaro, Mexico**
 - a. Scope 1&2 Natural Gas Usage - Electricity / Power - Square footage of building has increased which correlates to increased Electricity / Power usage
 - b. Scope 3 - Increased pre-launch shipments
- (4) NMP2 - Nartech Metal Products - Windsor ON, CAN**
 - a. Scope 3 applied 2022 data to 2021 as baseline year. No significant use of emissions in 2021, 0.96 would be an unattainable goal.
- (5) PMS1 - Prince Metal Stampings Plant 1&2 - Gadsden Alabama, USA**
 - a. Scope 3 - Increased prelaunch shipments

- (6) PMS3 - Prince Metal Stampings Plant 3 - Gadsden, Alabama USA**
 - a. Scope 3 Increased Prelaunch Shipments

Significant Action in 2024 to reduce Emissions:

- 1 - Scope 2 - Power monitoring Activities - Compressor Usage reductions**
- 2 - Scope 1 - Engage with Canadian Industry Partnership for Energy Conservation (CIPEC) Leaders for Canadian Facilities**
- 3 - Scope 3 - Reductions in Forming Lube and Machine Oil Reductions**

Note 1: Data for CO2 Emissions is calculated using The GHG Indicator: UNEP Guidelines for Calculating Greenhouse Gas Emissions for Businesses and Non-Commercial Organisation- United Nationals Environment Programme, 2000

- 1) Per Section 6.3 Waste Emissions: Solid Landfill Waste & Recycling Waste Water are excluded from this calculation, However waste data is monitored and tracked for reduction and improvement processes.

Revision	Date	Reason
3	July 2022	Corrections to 2021
4	February 2023	Change formatting, add 2022 data and target for 2023 3% reduction from previous Year
5	April 2023	Corrections to data – based on 2021 Covid 19. Add area for increases, add targets specific to Scope 1 / 2 / 3 Emissions
6	February 2024	Note 1: Data for CO2 Emissions is calculated using The GHG Indicator: UNEP Guidelines for Calculating Greenhouse Gas Emissions for Businesses and Non-Commercial Organisation- United Nationals Environment Programme, 2000 1) Per Section 6.3 Waste Emissions: Solid Landfill Waste & Recycling Waste Water are excluded from this calculation, however waste data is monitored and tracked for reduction and improvement processes. Add 2024 data.
7	October 2024	Corrections to scopes. Update all data. Separate reductions. Clarify reduction target of 30% by 2030 related to Scope ½ Emissions. And 10 % to Scope 3. Add reasons for increases and Significant actions for reductions
